no substantial changes since last report

The infographic is based on 178 incidents reported by HRS participating organisations over 6 months - 63% of which were incidents against aid recipients and their communities - detailed in our Analytical report. They compared with trends from the last report (Oct 23 - Mar 24) These figures are not representative of the total SEAH incidents or SEAH prevalence in the aid sector. However, such figures provide a valuable foundation for understanding key issues and identifying effective starting points for intervention.
